Appendix 1. Boxplot of the CESEE countries

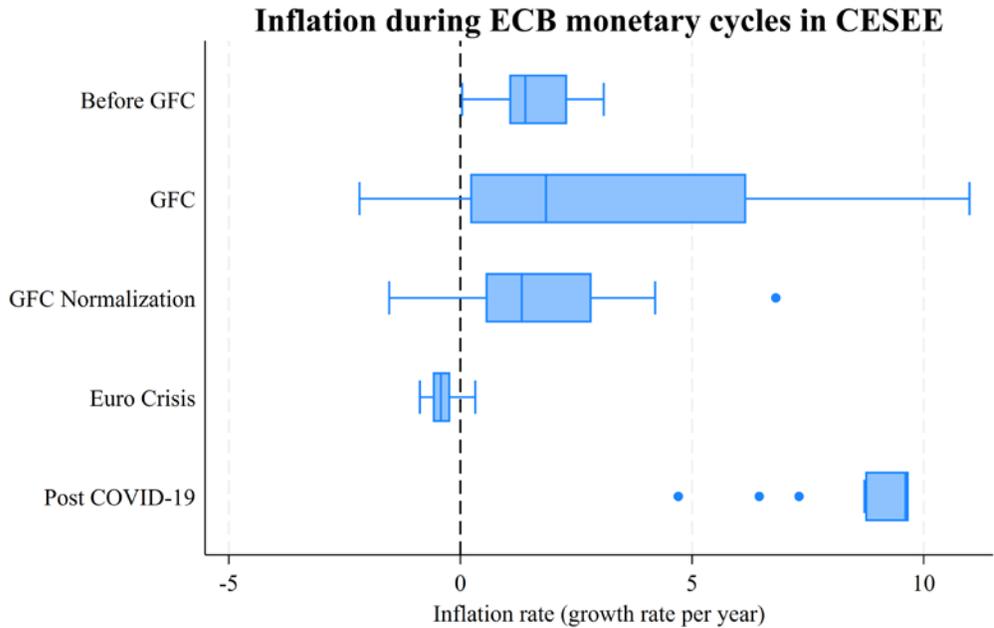

The variation over each cycle of the year-on-year growth rate of the bilateral exchange rate (1 USD = E Domestic currency unit) is represented in the box plot, expressed as percentage per year. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations.

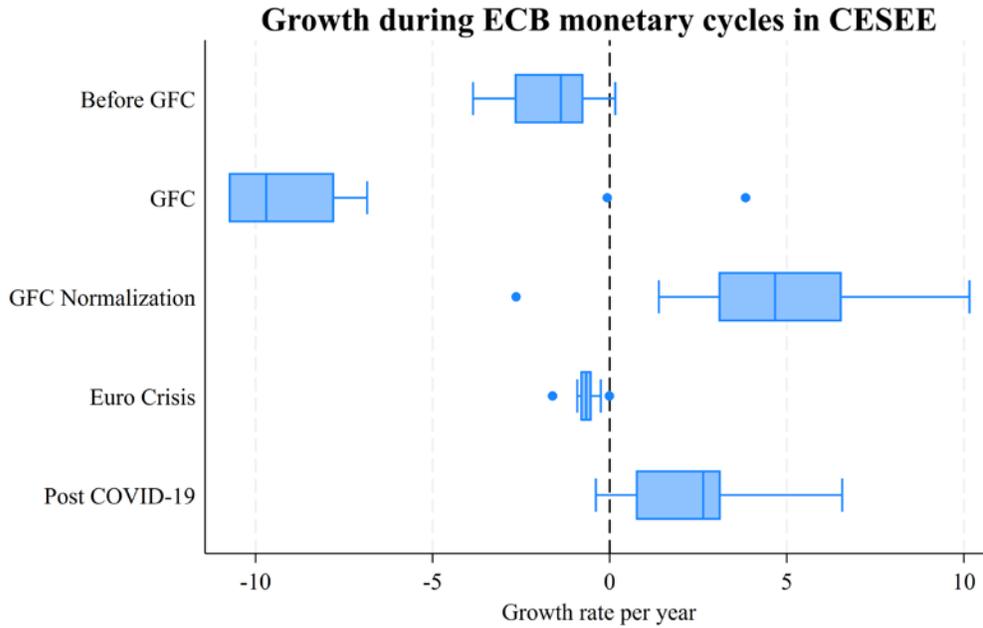

The variation over each cycle of the long-term interest rate is represented in the box plot, expressed as percentage. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations.

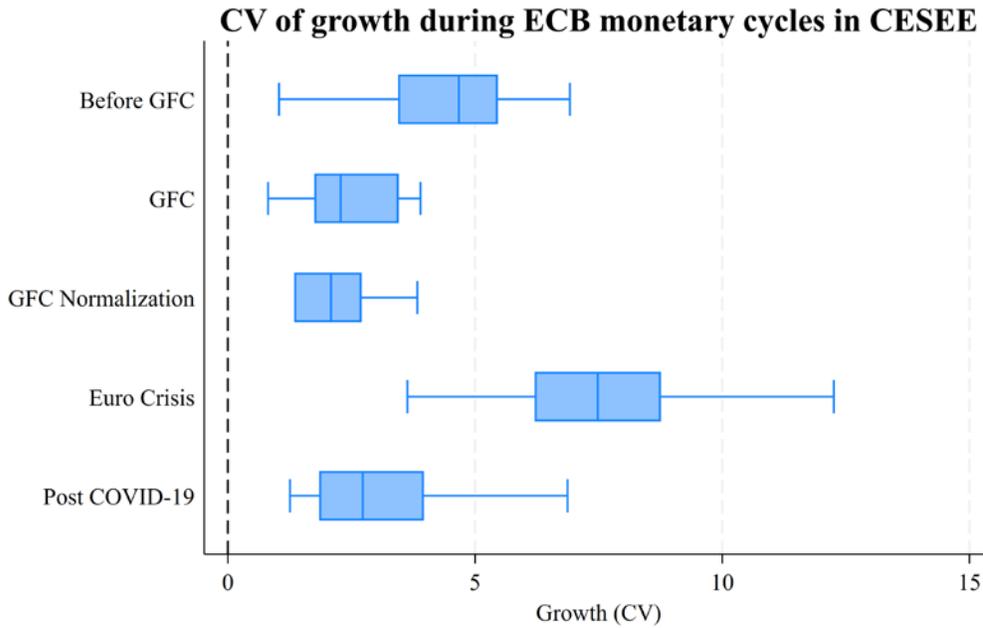

The variation over each cycle of the stock price index is represented in the box plot, expressed as percentage. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations.

The variation over each cycle of consumer price inflation is represented in the box plot, expressed as percentage per year. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations.

The variation over each cycle of real GDP growth is represented in the box plot, expressed as percentage per year. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations. Data available until July 2022.

The real GDP growth's coefficient of variation (computed as the ratio between the standard error and the mean) is represented in the box plot, expressed as percentage per year. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations. Data available until July 2022.

Appendix 2. Descriptive statistics for CESEE countries

Table 2.1. Descriptive statistics for CESEE countries over the five cycles (CIS included)

	Non-EU-CESEE (inc. CIS) 50 (47.6%)	EU-CESEE 55 (52.4%)	Total 105 (100.0%)	Test
Bilateral Exchange Rate	9.46 (40.65)	-1.01 (24.75)	4.03 (33.60)	0.113
Long-term interest rates	0.08 (1.93)	0.17 (3.13)	0.17 (3.06)	0.959
Stock prices	14.18 (62.62)	0.33 (55.66)	2.46 (56.49)	0.480
Consumer Price Inflation	6.17 (11.34)	6.49 (10.70)	6.35 (10.92)	0.891
Real GDP Growth	-0.50 (7.82)	-0.04 (8.42)	-0.18 (8.20)	0.819
Growth rate (CV)	4.04 (2.51)	3.97 (2.51)	4.00 (2.50)	0.904

General Gov. Gross Debt	34.42 (16.28)	33.18 (19.04)	33.77 (17.70)	0.722
Consumer Price Inflation	7.55 (5.27)	4.63 (3.33)	5.98 (4.55)	0.001
Fuel Export on Total Exports in %	14.58 (18.45)	7.21 (5.78)	10.57 (13.59)	0.006
Fuel Import on Total Exports in %	16.04 (9.41)	12.62 (5.26)	14.18 (7.60)	0.024
Chinn-Ito index, normalized [0-100]	32.41 (20.67)	85.48 (19.81)	63.13 (33.11)	<0.001
Inflation Targeters dummy	0.24 (0.43)	0.35 (0.48)	0.30 (0.46)	0.241
Financial Development Index [0-100]	26.73 (12.42)	36.46 (10.83)	32.08 (12.50)	<0.001
Exchange Rate Stability Index [0-100]	42.74 (28.07)	54.34 (25.34)	50.25 (26.76)	0.055
Central Bank Independence [0-100]	73.80 (13.59)	81.81 (6.51)	78.25 (10.97)	<0.001
Households, loans and debt securities	14.04 (7.10)	27.42 (10.97)	23.72 (11.68)	<0.001
Overall Institutional Score [0-100]	67.94 (5.56)	76.78 (2.84)	73.66 (5.83)	<0.001
De facto Measure of Financial Openness	49.90 (23.71)	56.99 (19.35)	54.69 (20.98)	0.159

Frequency (Percent%). Mean (Standard deviation) Coefficient of Variation: p-value from a pooled t-test.

The Non EU-CESEE (inc. CIS) group is composed by the following 10 countries: 6 CESEE members not in the EU: Albania (ALB), Bosnia and Herzegovina (BIH), North Macedonia (MKD), Montenegro (MNE), Serbia (SRB), and Turkey (TUR) (Non-EU CESEE exc. CIS); 4 CESEE members in the Commonwealth of Independent States (CIS) group: Belarus (BLR), Moldova (MDA), Russia (RUS), and Ukraine (UKR). The EU-CESEE group is composed of the following 11 countries: Hungary (HUN), Slovak Republic (SVK), Slovenia (SVN), Czech Republic (CZE), Poland (POL), Estonia (EST), Latvia (LVA), and Lithuania (LTU) (EU accession in 2004), Bulgaria (BGR), Romania (ROU), and Croatia (HRV) (EU accession in 2007 and 2013).

Table 2.2. Descriptive statistics for CESEE countries over the five cycles (CIS excluded)

	Non-EU-CESEE (exc. CIS) 30 (35.3%)	EU-CESEE 55 (64.7%)	Total 85 (100.0%)	Test

De facto Measure of Financial Openness	48.05 (19.86)	61.32 (20.18)	54.69 (20.98)	0.004

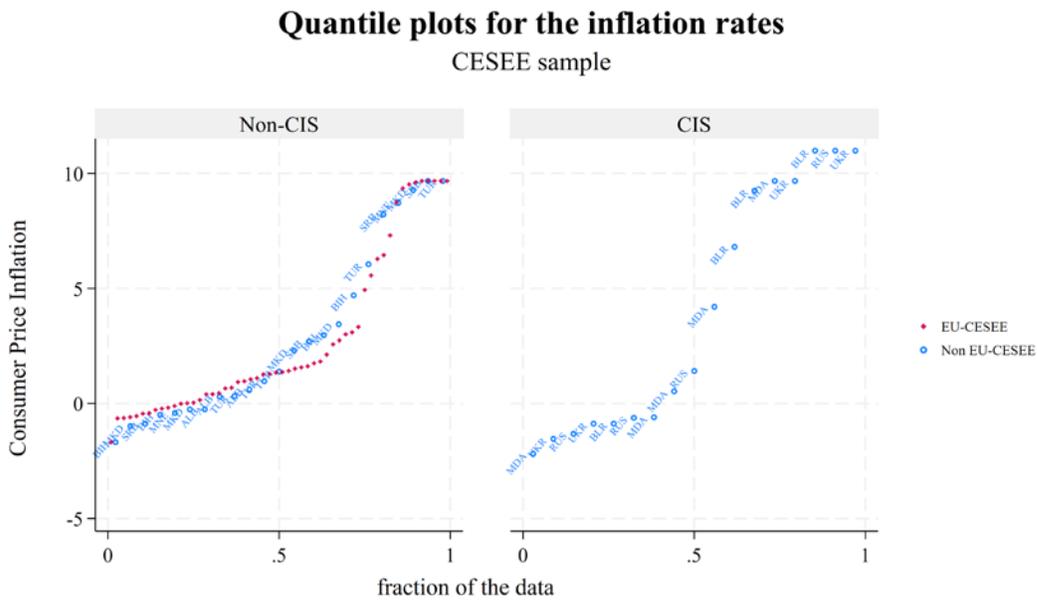

See note under Table 2.1. The "EU-CESEE in 2004" group is composed of the following 8 countries: Hungary (HUN), Slovak Republic (SVK), Slovenia (SVN), Czech Republic (CZE), Poland (POL), Estonia (EST), Latvia (LVA), and Lithuania (LTU) (EU accession in 2004). The other 13 countries are the countries that have not joined the EU in 2004.

Appendix 3. Quantiles plot for the CESEE countries

Exchange rates are windsorized and expressed in growth rates per year.

The variation over each cycle of the year-on-year growth rate of the bilateral exchange rate (1 USD = E Domestic currency unit) is represented in the quantile plot, expressed as percentage per year. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations.

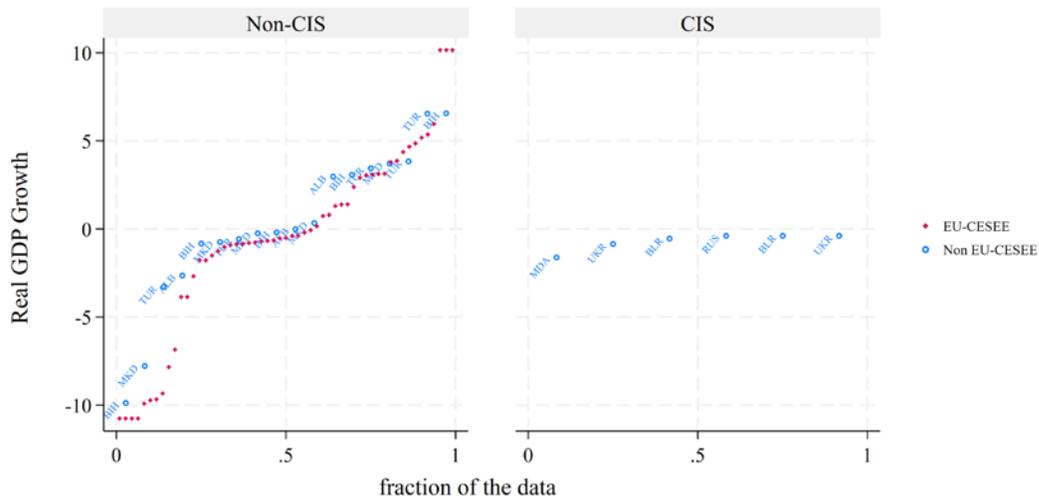

Inflation rates are windsorized and expressed in growth rates per year.

The variation over each cycle of consumer price inflation is represented in the quantile plot, expressed as percentage per year. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations.

Quantile plots for real GDP growth rates

CESEE sample

Real GDP growth rates are windsorized and expressed in growth rates per year.

The variation over each cycle of real GDP growth is represented in the quantile plot, expressed as percentage per year. The 21 CESEE countries are observed during the 5 monetary cycles, thus each country appears 5 times for a total of 105 possible observations. Data available until July 2022

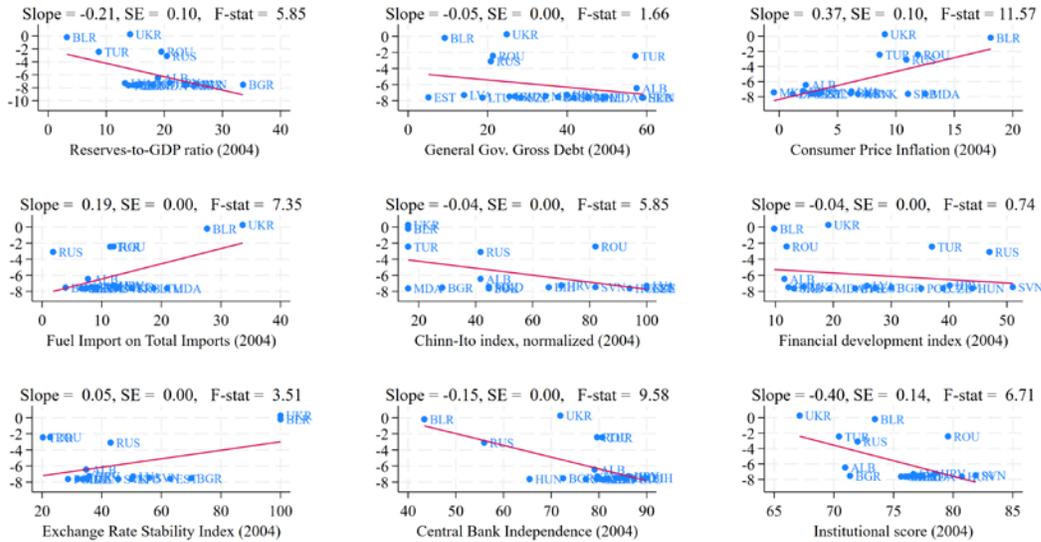

Appendix 4. Correlation with the fundamentals in CESEE

We present the results of univariate OLS regression analysis for our six explained variables to visualize the correlations with the fundamentals observed one year before each cycle.

The explained variable is the variation over the cycle of the year-on-year growth rate of the bilateral exchange rate (1 USD = E Domestic currency unit), expressed as percentage.. Model 1 is the full baseline model. Model 2 is the model with a backward selection procedure. Model 3 is Model 1 with interaction with a CESEE dummy. Model 4 is Model 3 with a backward selection procedure. Both selections based on p-values or on AIC give similar results for the selection of variables Robust SE in parenthesis.

The explained variable is the variation over the cycle of real GDP growth, expressed as percentage. Model 1 is the full baseline model. Model 2 is the model with a backward selection procedure. Model 3 is Model 1 with interaction with a CESEE dummy. Model 4 is Model 3 with a backward selection procedure. Both selections based on p-values or on AIC give similar results for the selection of variables Robust SE in parenthesis.
